

“AN INTRODUCTION TO STRUCTURAL METHODS” - DETAILED CONTENTS:

(Navigate directly to any part of the DVD-ROM by typing the desired frame number into the box found in the lower left corner of all frames.)

1	Elements of Lines and Plane	Frames 5 - 51	
	Introduction	Frames 6 - 14	
	Horizontal and Vertical Angles	Frames 15 - 22	
	<i>key concepts: inclination, plunge, bearing & azimuth</i>		
	Orientation of a Line	Frames 23 - 31	
	<i>key concepts: plunge, trend, use of the Brunton compass</i>		
	Orientation of a Plane	Frames 32 - 42	
	<i>key concepts: strike, dip, use of the Brunton compass</i>		
	<i>key animations: strike & dip of a plane</i>		<i>Frame 35</i>
	Orientation of a Line in a Plane	Frames 43 - 50	
	<i>key concepts: trend & plunge, rake</i>		
2	Map Interpretation: Simple Planar Surfaces	Frames 52 - 219	
	Understanding Map Patterns	Frames 53 - 105	
	Introduction	Frames 53 - 60	
	<i>key concepts: map components: topo base, contacts, units as colored areas, symbols, legend</i>		
	Horizontal Planes	Frames 61 - 74	
	<i>key animations: horizontal planes and complex topography</i>		<i>Frames 62, 64, 66, 67, 71</i>
	Vertical Planes	Frames 75 - 82	
	<i>key animations: vertical planes and complex topography</i>		<i>Frames 75, 76, 77, 79</i>
	Dipping Planes	Frames 83 - 105	
	<i>key concepts: rule of V's</i>		
	<i>key animations: rule of V's</i>		<i>Frames 86, 93</i>
	Determining Strike and Dip from Map Relationships	Frames 106 - 155	
	<i>key concepts: structure contours on a dipping plane, three-point problems</i>		
	Structure Contours	Frames 156 - 182	
	<i>key concepts: outcrop pattern of a dipping plane</i>		
	<i>key animations: structure contours across a fault or fold</i>		<i>Frames 173, 175, 177</i>
	Determining Depth	Frames 183 - 196	
	Determining Stratigraphic Thickness	Frames 197 - 218	
	<i>key concepts: stratigraphic & vertical thickness</i>		
	<i>key animations: outcrop width vs dip, thickness, and topo</i>		<i>Frames 201, 203</i>
3	Stereographic Projection I	Frames 220 - 384	
	Spherical and Stereographic Projection	Frames 221 - 242	
	<i>key concepts: spherical & stereographic projection; primitive circle</i>		
	<i>key animations: stereographic projection of lines</i>		<i>Frames 228, 231</i>
	<i>stereographic projection of planes</i>		<i>Frames 236, 239</i>
	Elements of the Stereographic Net	Frames 243 - 255	
	<i>key concepts: great circles, small circles, equal angle net</i>		
	<i>key animations: great & small circles</i>		<i>Frame 253 In-Depth Comment</i>
	Plotting Lines and Planes	Frames 256 - 310	
	Plotting a Plane	Frames 256 - 273	
	<i>key animations: plotting a dipping plane</i>		<i>Frames 261-269</i>
	Plotting a Line	Frames 274 - 290	
	<i>key animations: plotting a line</i>		<i>Frames 278-285</i>
	Plotting a Line in a Plane	Frames 291 - 294	
	Plotting the Pole to a Plane	Frames 295 - 310	

	Solving Problems Using the Stereonet	Frames 311 - 383
	Introduction	Frames 311 - 313
	Intersection of Two Planes	Frames 314 - 344
	<i>key concepts: determining a fold axis from the intersection of fold limbs and of cleavage & bedding; apparent dip in a plane of section</i>	
	Plane Defined by Two Lines	Frames 345 - 375
	Angle Between Two Planes	Frames 376 - 383
4	Constructing Geologic Sections	Frames 385 - 437
	Introduction	Frames 386 - 392
	<i>key concepts: the line of section, dip vs apparent dip, solving for apparent dip</i>	
	Construction Procedures	Frames 393 - 412
	<i>key concepts: horizontal and vertical scale, vertical exaggeration, constructing the topo profile</i>	
	<i>key animations: constructing the topographic profile</i>	<i>Frames 395-400</i>
	<i>constructing the geologic section</i>	<i>Frames 401-407</i>
	Section Considerations	Frames 413 - 425
	<i>key concepts: depth of section, constant unit thickness, retrodeformability</i>	
	<i>key animations: retrodeformability</i>	<i>Frames 425</i>
	Section Conventions	Frames 426 - 436
5	Map Interpretation: Faults	Frames 438 - 595
	Fault Elements and Fault Types	Frames 439 - 458
	<i>key concepts: footwall & hanging wall; dip & strike slip; normal, reverse, thrust, low angle normal dip slip faults; dextral & sinistral strike slip faults; oblique and rotational faults</i>	
	<i>key animations: footwall & hanging wall; dip & strike slip</i>	<i>Frames 444-445, 447-454</i>
	Recognizing Faults on Maps	Frames 459 - 514
	<i>key concepts: truncation, repetition, & omission of units; klippe, fenster</i>	
	<i>key animations: truncation patterns</i>	<i>Frames 466, 468-470</i>
	<i>repetition & omission</i>	<i>Frames 481, 489</i>
	Slip Versus Separation	Frames 515 - 581
	Introduction	Frames 515 - 526
	Determining Vertical Separation	Frames 527 - 544
	Calculating Net Slip	Frames 545 - 581
	<i>key concepts: piercing points, slickenfibers</i>	
	Using Cut-Off Lines	Frames 582 - 594
6	Stereographic Projections II	Frames 596 - 668
	Rotating a Line	Frames 597 - 611
	<i>key concepts: rotation of linear elements about a fold axis</i>	
	<i>key animations: small circle rotation path of a line</i>	<i>Frames 601-602</i>
	Rotating a Plane	Frames 612 - 614
	Solving Rotation Problems	Frames 615 - 667
	One Rotation Around a Horizontal Axis	Frames 615 - 631
	<i>key concepts: rotation of linear elements in dipping planes</i>	
	Two Rotations Around Horizontal Axes	Frames 632 - 667
	<i>key concepts: rotation of tilted planes below a dipping unconformity, rotation of linear elements in the limbs of a plunging fold</i>	
7	Map Interpretation: Folds	Frames 669 - 786
	Fold Elements	Frames 670 - 684
	<i>key concepts: fold axis, cylindrical & non-cylindrical folds, hinge line, limb, hinge plane</i>	
	<i>key animations: fold axis generates a cylindrical fold</i>	<i>Frames 673</i>
	Fold Orientation	Frames 685 - 693
	<i>key concepts: Fleuty's classification scheme; plunging, recumbent, reclined & overturned folds</i>	

Fold Geometry	Frames 694 - 719	
Fold Closure and Facing Direction	Frames 694 - 703	
<i>key concepts: syncline & anticline; neutral fold; antiformal & synformal folds</i>		
Interlimb Angle and Symmetry	Frames 704 - 719	
<i>key concepts: symmetrical & asymmetrical folds; isoclinal folds; parallel & concentric folds</i>		
Viewing Folds Down-Plunge	Frames 720 - 743	
<i>key concepts: fold profile, down plunge construction</i>		
<i>key animations: down plunge view of a fold in a map plane</i>		Frames 725
<i>principle of “looking down-plunge”</i>		Frames 726, 728, 730, 732
Interpreting Folds on Maps	Frames 744 - 765	
Measuring Fold Elements on Geologic Maps	Frames 766 - 785	
8 Map Interpretation: Unconformities, Intrusions	Frames 787 - 838	
Unconformities	Frames 788 - 822	
<i>key concepts: angular unconformity, disconformity, nonconformity; unconformity map patterns</i>		
<i>key animations: development of an angular unconformity</i>		Frames 793
Intrusions	Frames 823 - 837	
<i>key concepts: concordant & discordant bodies; dikes, plutons, extrusives</i>		
9 Map Interpretation: Thrust Faults	Frames 839 - 938	
Thrust Fault Geometry	Frames 840 - 882	
<i>key concepts: flats, ramps, bedding plane glides, footwall & hanging wall ramps, cutoffs, fault bend folds, ramp anticlines, fensters & klippen, up-ramp displacement</i>		
<i>key animations: displacement over ramps & flats; fault bend folds</i>		Frames 850
<i>thrust fault elements in cross section</i>		Frames 857-861
Dynamic Development of Thrust Belts	Frames 883 - 908	
<i>key concepts: sequence of fault displacement, piggy-back transport, basal detachment, splay, layer parallel faulting</i>		
<i>key animations: dynamic thrust belt development</i>		Frames 887, 892-894
Map Interpretation	Frames 909 - 937	
<i>key concepts: plunge of fault bend folds; map view of ramps, flats, cut-offs; balanced cross sections</i>		
<i>key animations: relationship between plunge of a structure and elongation of profile in map and cross section</i>		Frames 913
<i>geologic cross sections elongated to correspond to map view</i>		Frames 916-920, 921-923
<i>balancing cross sections</i>		Frame 927 In Depth Comment
<i>down plunge viewing of map patterns</i>		Frames 928-929
10 Fold Analysis	Frames 939 - 1046	
π -Diagrams and Fold Elements	Frames 940 - 970	
<i>key concepts: Pumpelly's rule, β vs π diagrams; bisecting surface; interlimb angle</i>		
π -Diagrams and Fold Style	Frames 971 - 992	
<i>key concepts: equal area stereonet, contour stereograms</i>		
Fold Asymmetry and Vergence	Frames 993 - 1002	
<i>key concepts: parasitic folds; Z-, M-, & S-folds; fold vergence</i>		
Fold Shape and Dip Isogons	Frames 1003 - 1021	
<i>key concepts: layer thickness vs axial planar thickness; Ramsay's class 1A, 1B, 1C, 2 & 3 folds</i>		
<i>key animations: constructing dip isogons</i>		Frames 1005-1008
Refolded Folds	Frames 1022 - 1045	
<i>key concepts: Type 0, 1, 2, & 3 refolded folds</i>		
<i>key animations: refolding folds (all types)</i>		Frames 1028-30, 1034-35, 1039-40

11	Stress, Fracture, and Fault Analysis	Frames 1047 - 1238	
	Introduction	Frames 1048 - 1054	
	<i>key concepts: triaxial stress experiments, joints, conjugate faults</i>		
	Stress	Frames 1054 - 1089	
	Stress on a Plane	Frames 1054 - 1064	
	<i>key concepts: stress vs force; tensile & compressive stress; shear & normal stress</i>		
	Stress at a Point	Frames 1065 - 1076	
	<i>key concepts: maximum, minimum & intermediate principal stresses; lithostatic stress; confining pressure; triaxial stress; general stress; effective stress; mean & differential stress</i>		
	<i>key animations: pore pressure</i>		<i>Frames 1073</i>
	Determining Stress on a Plane	Frames 1077 - 1089	
	The Mohr Circle for Stress	Frames 1090 - 1160	
	Constructing the Mohr Circle	Frames 1090 - 1117	
	<i>key animations: using the Mohr Circle</i>		<i>Frames 1099-1103</i>
	<i>visualizing states of stress with the Mohr Circle</i>		<i>Frames 1105-1108</i>
	The Coulomb Envelope	Frames 1118 - 1151	
	<i>key animations: experimental derivation of the Coulomb Envelope</i>		<i>Frames 1119-1123</i>
	<i>interactions between the state of stress (Mohr Circle) and failure (Coulomb envelope)</i>		<i>Frames 1146-1148</i>
	<i>the role of pore pressure in veining</i>		<i>Frame 1148 In-Depth Comment</i>
	The Role of Anisotropy	Frames 1152 - 1160	
	Fracture and Fault Analysis	Frames 1161 - 1237	
	Joints and Dikes	Frames 1161 - 1177	
	<i>key concepts: joint or fault sets, arrays, and systems</i>		
	Conjugates and the Anderson Model of Faulting	Frames 1178 - 1214	
	<i>key concepts: geometry of conjugates and principal stress axes, stereonet analysis of conjugates and principal stress axes, Anderson theory of faulting</i>		
	Faulting in Anisotropic Rocks	Frames 1215 - 1228	
	Stress Fields	Frames 1229 - 1237	
	<i>key concepts: stress trajectories</i>		
12	Strain: Basic Principles	Frames 1239 - 1493	
	Introduction	Frames 1240 - 1266	
	Deformation and Strain	Frames 1240 - 1251	
	<i>key concepts: deformation, rigid body rotation & translation; distortion, dilation, strain</i>		
	Principles of Strain	Frames 1252 - 1266	
	<i>key concepts: systematic vs unsystematic deformation; homogeneous vs inhomogeneous strain; geometric compatibility; strain ellipsoid & ellipse, principal axes of strain</i>		
	The Strain Ellipse	Frames 1267 - 1317	
	<i>key concepts: quadratic elongation, angular shear, shear strain</i>		
	<i>key animations: strain ellipse developing from initial circle with marker lines</i>		<i>Frames 1269</i>
	<i>changes in lengths of lines, orientations of lines, and angles</i>		<i>Frames 1273, 1281, 1287</i>
	Strain Analysis	Frames 1318 - 1384	
	Introduction	Frames 1318 - 1321	
	Deformed Circular or Elliptical Markers	Frames 1322 - 1335	
	<i>key concepts: Rf method</i>		
	Changes in Lengths of Lines	Frames 1336 - 1360	
	<i>key concepts: algebraic method, Fry method</i>		
	Changes in Angles between Originally Perpendicular Lines	Frames 1361 - 1384	
	<i>key concepts: algebraic method, Wellman method</i>		

Three Dimensional Strain	Frames 1385 - 1437
The Strain Ellipsoid	Frames 1385 - 1417
<i>key concepts: prolate, oblate & triaxial ellipsoids; constriction, flattening, general & plane strain;</i>	
<i>Flinn diagram</i>	
<i>key animations: Flinn diagram</i>	<i>Frames 1406</i>
Fabric and the Strain Ellipsoid	Frames 1418 - 1437
<i>key concepts: penetrative vs spaced fabric; anisotropic vs isotropic fabric; foliation & lineation;</i>	
<i>L-, S-, & L-S tectonites and corresponding strain ellipsoids</i>	
Strain Paths	Frames 1438 - 1492
Finite and Incremental Strain	Frames 1438 - 1440
Pure and Simple Shear	Frames 1441 - 1461
<i>key concepts: rotational vs irrotational (coaxial vs noncoaxial) strain; pure vs simple shear</i>	
<i>key animations: pure vs simple shear</i>	<i>Frames 1441-1443, 1452</i>
<i>simple shear</i>	<i>Frames 1462</i>
<i>shear zone development</i>	<i>Frames 1479-1480</i>
<i>tension gash development</i>	<i>Frames 1483-1484</i>
Shear Sense Indicators	Frames 1462 - 1492
<i>key concepts: mylonites, rotort-shaped porphyroblasts (mica fish), quartz ribbons vs subgrains,</i>	
<i>shear zones, tension gashes</i>
